Dear Hiring Manager,

I am writing to express my interest in Java Developer opportunities within your organization. With over 5 years of experience designing and delivering high-availability, service-oriented applications using Java, Spring Boot, Spring Security, and RESTful microservices, I bring a strong foundation in backend development along with a track record of measurable impact.

In my current role at Tata Consultancy Services (TCS), I have worked extensively on Java/J2EE and Spring Boot-based enterprise applications, contributing to a 15% reduction in post-release bug fixes and a 20% improvement in database query performance. My experience spans the full software development lifecycle — including event-driven integration with Kafka and RabbitMQ, database optimization, CI/CD pipelines, and Agile/Scrum delivery — across insurance and analytics domains. I am also currently expanding my skill set into agentic AI development using LangChain4j and Spring AI, reflecting my commitment to continuous learning and staying current with evolving technology.

I am confident that my technical skills, adaptability, and collaborative approach would allow me to contribute meaningfully to your team. I have attached my resume for your review and would welcome the opportunity to discuss how my background aligns with your requirements.

Thank you for considering my application. I look forward to the possibility of connecting.

Sincerely,
Akhil Mukesh
